

VPN access

NCAR and UCAR employees who are working remotely, and some other individuals who work closely with NCAR, may need to use the virtual private network (VPN) to connect with internal resources.

If you need VPN access, see your lab's system administrator about downloading the necessary client software.

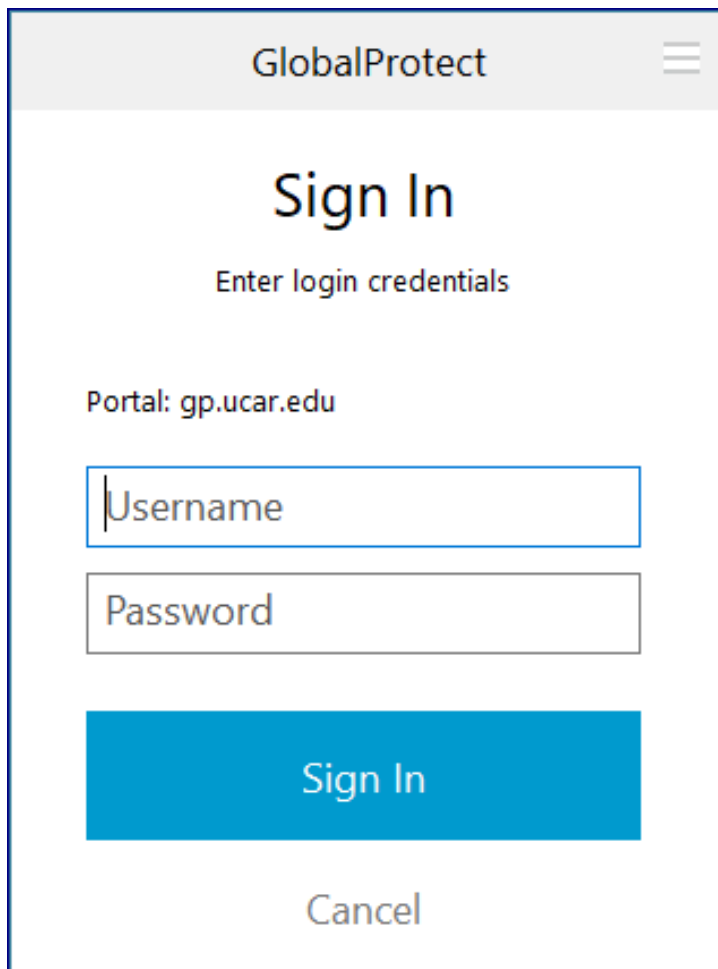

When you have the client software and the required authentication token or app, you can connect to the VPN as described below.

Connecting with GlobalProtect

Start by clicking the **GlobalProtect** icon on your desktop or taskbar.

Enter your username. (Remove **CIT** if it appears in the password field. Enter only your username.)

Follow the documented procedures for using your [authentication token or app](#) (for example, CIT password and Duo push). Use **gp.ucar.edu** as the portal name if it doesn't appear already.

A screenshot of the GlobalProtect Sign In dialog box. The dialog has a light gray header with the text "GlobalProtect" and a hamburger menu icon. Below the header, the text "Sign In" is displayed in a large font, followed by "Enter login credentials" in a smaller font. The "Portal:" label is followed by the text "gp.ucar.edu". There are two input fields: the first is labeled "Username" and the second is labeled "Password". Below the input fields are two buttons: a blue "Sign In" button and a gray "Cancel" button.

GlobalProtect

Sign In

Enter login credentials

Portal: gp.ucar.edu

Username

Password

Sign In

Cancel

A box like the one below will confirm that you are connected to the VPN.

GlobalProtect

Connected

You are securely connected to
the corporate network

Disconnect

Click **Disconnect** when you are finished.
