

# Software modules and packages

The list below shows the software *environment modules* on the **Casper** data analysis and visualization system as of approximately 1 a.m. Mountain time. (The output is from a **module spider** command.)

See this page for related information: [Machine learning / deep learning on Casper](#)

To learn more about a package or to see complete output for truncated lines (those ending in ...), run:

```
module spider module_name
```

For detailed information about a specific package, include the version number, as in:

```
module spider module_name/1.11
```
