

Software on Cheyenne

Software environment modules on the Cheyenne system today are listed below. (The output is from a **module spider** command.) To learn more about a package or to see complete output for truncated lines (those ending in ...), run this on Cheyenne:

```
module spider module_name
```

For detailed information about a specific package, include the version number, as in this example:

```
module spider module_name/1.11
```

For a list of software modules and versions that are on the Casper data analysis and visualization nodes, see: [Casper software modules and packages](#).

Contact CISL if you have suggestions for additional software to include or if a module or package that you need is not available.
